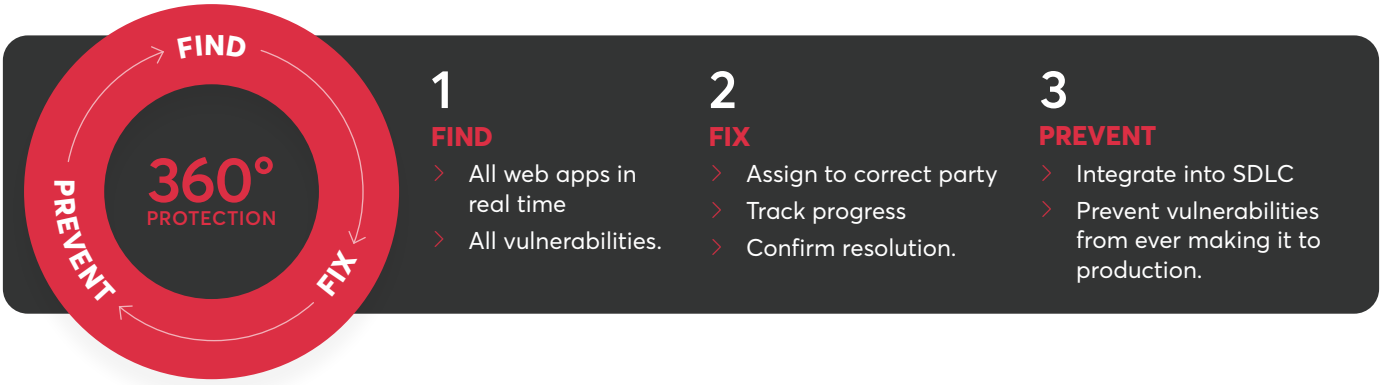
Take Control of your Web Security

Acunetix are well renowned as the pioneers in the field of automated web application security testing and as leaders of website structure analysis and vulnerability detection.

In the security-focused world that we live in, vulnerability scanning is not enough for a large organization.

What is required is a comprehensive web application security management platform that allows the enterprise to easily find, fix, and prevent vulnerabilities. Acunetix 360 is an end-to-end web security solution that offers a 360° view of an organization's security posture. It allows the enterprise to take control of the security of all its web applications, web services, and APIs, ensuring long-term protection.

End-to-end web security for your organization: FIND. FIX. PREVENT.



What Our Clients Have to Say about Acunetix 360

"Initially, we were thrilled to run Acunetix to find and fix some rather large vulnerabilities we had no idea existed. Since then, we have moved to a more comprehensive strategy that includes multiple scan targets running in tandem with our software development lifecycle. When our customers ask us if our software is security tested, Acunetix gives us the confidence to say it is."

Greg Fuller | Quality Assurance Analyst, Vermont Systems

"We use Acunetix as part of our Security in the SDLC and to test code in DEV and SIT before being promoted to production."

Kurt Zanzi | Information Security Office, Xerox CA-MMIS

AVG · AMERICAN EXPRESS · U.S. AIR FORCE · HSBC · SONY

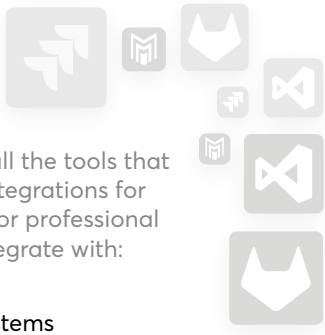
Find All Your Assets

Discover all of your web and network assets and easily import all the assets that you already know. The proven scanning engine of Acunetix 360 provides the most comprehensive results in the industry and delivers them at an unbeatable speed. In just a matter of hours you'll be able to see real risks associated with your entire organization's web presence.

Fix Vulnerabilities

After scanning all your web applications, web services, and APIs, you can assign results to the appropriate developer for remediation. This can be done automatically or manually. Once the responsible developer marks the vulnerability as addressed, Acunetix 360 automatically retests the vulnerability to confirm that it has in fact been fixed. If it was not, the ticket goes back to the developer to correct. If successful, the ticket goes to the manager to inform them about completion and is closed.

Out-of-the-Box Integrations



Acunetix 360 integrates with all the tools that fit your workflows. We build integrations for you and do not charge extra for professional services. Acunetix 360 can integrate with:

- Issue Tracking Systems
- Continuous Integration Systems
- APIs

Central Management Console

Acunetix 360 provides an integrated view of your company's security posture with results of all scans displayed in a central management dashboard. It provides management with historical data, trending, and prioritization reports. Acunetix 360 can also generate reports for vulnerabilities listed in PCI DSS, OWASP Top 10, ISO 27001, and HIPAA, among others.

Infinitely Configurable Workflows

It takes teamwork and collaboration to build and maintain an effective security program. Acunetix 360 allows you to easily set up workflows to help you address identified vulnerabilities. You can include security, development, and management teams in the process - any level of customization is possible. You may add as many users as you want with granular permissions, as well as use tools of choice such as email, slack, text, and so on.

Integrate into the SDLC

By integrating into every stage of your SDLC, we allow you to become more proactive in your scanning approach. This helps you ensure that security issues are tackled at the source.

- Catch vulnerabilities before they make it to production
- Notify developers via the tools they use
- Know when issues are resolved.
